RUN YOUR TRADING LIKE A BUSINESS — NOT A BET

THE TRADER'S BUSINESS PLAN

Your account is a company. Start acting like the owner.

The one-page business plan, the daily operating routine, and the five beginner mistakes that quietly bankrupt new gold traders — from a guy who ran a company for ten years and still had to learn this the expensive way.

THE SHIFT

A BET ASKS "WILL I WIN?" A BUSINESS ASKS "CAN I STAY OPEN?"

Guys, let me tell you the most expensive thing I ever learned.

I spent ten years building a company. Systems everywhere. Cash flow tracked to the dollar, suppliers on contracts, staff on checklists. If a manager came to me and said *"I moved half our budget into one deal because it felt right,"* I'd have walked him out the door that afternoon.

Then I opened a gold trading account — and I became that manager.

No plan. No cost control. No books. Just a screen, a feeling, and a lot of confidence earned in a completely different game. I ran my company like an operator and my account like a gambler, and the account paid the price, more than once, before it finally clicked:

> **Trading isn't a bet you win. It's a small business you operate.**

A bet asks one question: *will this trade win?* You can't control that. Nobody can — not me, not any channel, not any indicator. A business asks a better question: **whatever happens today, can I keep the doors open?** That one you can control completely.

Here's the good news, and it's the whole reason I wrote this for beginners: **you already know how a business works.** You know a shop can't sell off all its inventory in week one. You know costs get decided before the month starts, not after. You know a company that keeps no books has no idea whether it's actually making money. Every one of those instincts transfers straight onto a gold chart.

You don't need to become a new person. You need to bring the operator you already are to the screen. This plan is that transfer, in four parts. Print it. Run it. Same way, every day — because in business, *the routine is the edge.*

PART 1

YOUR TRADING BUSINESS PLAN, ON ONE PAGE

Every real business starts with a plan that fits on a page. Yours has three lines.

1 YOUR CAPITAL IS YOUR INVENTORY — YOU CANNOT RUN OUT.

The money in your account is not a score, and it's not a stack of chips. It's **inventory** — the stock on your shelves. A shop that burns through its entire inventory in one bad week isn't unlucky; it's closed. Your first job as the owner is boring and non-negotiable: *protect the inventory so the business can open again tomorrow*. Every rule in this plan serves that one line.

2 FIXED RISK PER TRADE IS YOUR COST OF GOODS.

No business lets its costs float on mood. Rent is set. Supplier prices are set. So your cost per trade gets set the same way — **in advance, while you're calm, as a small fixed slice of the account.** A common teaching example is risking no more than about 1% of your account on any single trade; on a $1,000 account, that's $10. It will feel too small. That's the point. A cost that small can't kill the company — and costs that can't kill the company are the only costs a smart owner signs off on.

3 A LOSING DAY IS A BUSINESS COST — A LINE ITEM, NOT A CRISIS.

A restaurant throws away food every night. A delivery company loses parcels. A retailer eats returns. Nobody calls an emergency meeting, because a known cost that's already in the budget isn't a disaster — it's Tuesday. Losing trades are exactly that: **the cost of doing business in the gold market.** They will come no matter how good you get, so the plan budgets for them — a fixed cost per trade, and a **daily loss ceiling**: the point where the shop closes for the day, on purpose, with the owner still in charge.

```
Write it as numbers, not vibes: One trade may cost this business $ ______ and not one dollar more. The day is over when the business is down $ ______ . Shop closed. Reopen tomorrow.
```

The traders who fail aren't the ones who take losses. They're the ones who treat a normal business cost like a personal insult — and start spending the inventory to make the feeling go away.

PART 2

THE DAILY OPERATING ROUTINE

A business isn't a building. It's a set of operations that repeat. Here are yours.

OPEN THE PRE-MARKET CHECK — 10 MINUTES

Before you look for a single trade, do what every owner does before unlocking the door:

- **Check the calendar.** Is there major news scheduled today that moves gold? Know when, so it never surprises you mid-trade.
- **Read the market before you touch it.** Where has price been moving? Which levels do you actually care about? Decide what you'd want to see *before* you want to see it.
- **Write the plan.** One or two scenarios, each with an entry idea, a stop, and the fixed cost from Part 1. If you can't write it down, you don't have a plan — you have a mood.

OPERATE OFFICE HOURS — ONE SESSION, THEN CLOSE

Your business has opening hours. It is not open twenty-four hours a day, and neither are you. Pick **one session** that fits your life, work it with full attention, and then close. The market runs around the clock precisely so it can outlast anyone who tries to match it. An owner who never leaves the shop doesn't make more money — he makes worse decisions. Fewer, better hours beat more, tired ones.

CLOSE CLOSING THE BOOKS — JOURNALING IS YOUR BOOKKEEPING

A business that keeps no books doesn't know if it's profitable — it just knows whether the till *feels* full. Most beginners trade like that for years. You won't, because closing time has one job: **the ledger.** For every trade, log the setup, the size, the outcome, and — this is the entry beginners skip — *what you were feeling when you clicked.*

THEN THREE QUESTIONS, EVERY EVENING, IN WRITING:

1. **Did I follow my plan today — yes or no?** (Not "did I profit." Did I *operate*.)
2. **What did today cost or earn the business, in dollars?**
3. **What is the one thing I'll do differently tomorrow?** One. Not five.

Ten minutes a night. In a month you'll own something almost no beginner has: real data about your own business, instead of a blur of feelings about the market.

PART 3

FIVE BEGINNER MISTAKES THAT BANKRUPT THE BUSINESS

Every one of these is a business decision you'd never make in a business. Watch how obvious they become through the owner's lens.

1 OVERLEVERAGING — *betting the company on one deal*

No sane owner puts the entire company's survival on a single contract, no matter how "sure" it looks — because if it fails, there is no company left to be right next time. Oversized positions are exactly that deal. The market doesn't have to be wrong about you twice; once is enough. Size every trade so that being wrong is a cost, never a closure.

2 REVENGE TRADING — *throwing good money after bad*

A supplier burns you, and instead of writing it off, you wire him *more* money to "make it back." No owner does this — but tilted traders do it every day: doubling size right after a loss to erase the feeling. Here's the operator's truth: **a loss is not a debt the market owes you.** It's a cost that's already booked. Log it, close the ledger, and let tomorrow's business be tomorrow's business.

3 NO STOP-LOSS — *running with no cost ceiling*

Ask any owner: "What's the most this can cost you?" If the answer is "I don't know," that's not a business — that's an open liability with your name on it. A trade without a stop-loss is one position with no maximum cost, which means its real potential cost is *everything on the shelves*. The stop isn't an admission you might be wrong. It's the cost ceiling that makes the whole plan mean something. Set it before you enter, every time, no exceptions.

4 CHASING NEWS CANDLES — *buying inventory at panic prices*

When gold spikes on a headline, jumping in mid-candle is like restocking your shop during a panic, at the worst prices of the day, from the least reliable supplier. The pros positioned *before* the rush or wait for the dust; the beginners pay the top and become everyone else's exit. If you didn't plan the trade before the spike, the spike is not your trade. There is always another delivery tomorrow.

5 COPYING TRADES BLINDLY — *outsourcing decisions, keeping all the risk*

No owner signs a contract they haven't read because "a guy online said it's good." Following any signal — including mine — without knowing your own size, your own stop, and your own cost per trade is exactly that contract: someone else makes the decision, but *your* inventory carries the risk. Analysis from others can inform your business. It can never run it. The books, the ceiling, and the final click belong to the owner. That's you.

THE DAILY ONE-PAGER

OPEN FOR BUSINESS

Run it out loud, every day. If any box is unchecked, the shop isn't open yet.

BEFORE THE SESSION — OPENING THE SHOP

- [ ] I checked today's **news calendar** — no scheduled event can ambush me.
- [ ] My **cost per trade is fixed in dollars** and written down.
- [ ] My **daily loss ceiling** is set — I know exactly where today ends.
- [ ] My **plan is written**: scenario, entry, stop — before the market opens for me.

DURING THE SESSION — OPERATIONS

- [ ] Every position has a **stop-loss set before entry**. No stop, no trade.
- [ ] Position **size was calculated from the stop**, not picked by feel.
- [ ] I am **not adding to a losing position** — ever.
- [ ] This trade is **from my written plan**, not from a candle, a headline, or a hot tip.

AFTER CLOSE — CLOSING THE BOOKS

- [ ] Every trade is **in the journal**: setup, size, outcome, feeling.
- [ ] I answered the **three evening questions** in writing.
- [ ] If I hit the daily ceiling: **shop closed, laptop shut** — reopening tomorrow.

Full column of checks and you're an operator.
One empty box and you're a bettor with a chart open. The difference is the whole game.

BEFORE YOU GO

KEEP THE DOORS OPEN. THAT'S THE BUSINESS.

Guys — I'll be straight with you, the way I'd want a partner to be straight with me.

This plan will not make gold move your way. Nothing does that, and anyone who says otherwise is selling you a feeling. What it does is smaller and far more valuable: it keeps the business **open** long enough for your skill to actually grow — which is the one thing every broke trader I've met ran out of time for.

Open the shop tomorrow. Keep the books. Protect the inventory.

WATCH THE PLAN RUN LIVE — FREE

I post my own gold analysis every day on the free channel. Every trade with a stop-loss, losses posted right next to the wins, and never a promise of profit. Those are the channel's rules, because that's how a business reports: honestly, or not at all. If you want to watch this plan operate in real market conditions, you're welcome to sit in the room.
